# Lexing Conference 2016

June 2<sup>nd</sup> . Shanghai, China

Embracing A World With Robots

# Introduction

With the development of industrial automation and computer technology, robots started to enter the stage of mass production and practical application since the 1960s. In China and in the rest of the world, many job positions have been taken over by industrial robots, service robots. We can see robots are no longer simple automatic machines but good helpers in many fields. A number of legal issues come up with the fast development of robot industry with the legislation lagging behind.

Lexing is an international network of legal professionals focused on digital and emerging technology law with an orientation to the legal issues related to robotics.

At this upcoming annual conference, Lexing members from more than 20 jurisdictions will meet in Shanghai to discuss and exchange views about the latest legal issues on robotics and other related areas.

# Participants

Alain Bensoussan	Alain Bensoussan Avocats Lexing	France
Andreas Lober	Beiten Burkhardt	Germany
